# SAFE PAK

Your Safety, One Tap Away

Presented by: Abdul Moiz

# Problem Statement

- Victims face delays and barriers in registering FIRs and accessing emergency support.
- Citizens lack awareness of their legal rights and real-time crime alerts in their area.
- Police departments rely on inefficient manual systems for FIRs, alerts, and emergency response.

# Solution

- Develop a unified mobile application that streamlines the reporting of crimes, emergency communication, and legal awareness for citizens.
- Empower users with instant access to police, emergency contacts, and relevant legal information through an AI-assisted interface.
- Provide law enforcement with a centralized admin portal to efficiently manage FIRs, respond to emergencies, and issue public safety alerts.

# Project Goals

1. Enable easy digital FIR filing with GPS auto-location and multimedia evidence, ensuring quick and accessible crime reporting.
2. Provide a centralized portal for law enforcement to manage FIRs, real-time emergency alerts, public safety notifications, and incident data efficiently.

# Features – User Facing

- FIR Management
  a. Request FIRs digitally through the mobile app
  b. Auto-fill location details using GPS
  c. View FIR submission status and history
  d. Submit evidence (e.g. images, videos) with FIR

# Features – User Facing

- Emergency Support
  a. Send SOS alerts to police and selected emergency contacts with live location
  b. Trigger emergency alert via Shake detection (triple shake) and Long-press emergency button
  c. Store and manage trusted emergency contacts

# Features – User Facing

- Criminal Alerts
  a. Receive real-time criminal alerts based on location
  b. View nearby incidents and warnings issued by authorities

# Features – User Facing

- SafePak AI
  a. Use AI chatbot to ask what legal actions apply to a situation (e.g., “I was robbed”)
  b. Get summaries of relevant sections from the Pakistan Penal Code
  c. AI assistant can guide during emergencies and legal confusion

# Features – Admin Facing

- View, verify, accept, or reject FIRs submitted by users
- Receive real-time emergency alerts from users
- Add and manage public criminal alerts
- Track and respond to emergency cases with location data
- Maintain and manage a database of incidents and alerts

# Architecture

- **Clean Architecture**

Clean Architecture in Flutter promotes a modular, scalable, and testable application structure by separating concerns into distinct layers: Presentation, Domain, and Data.

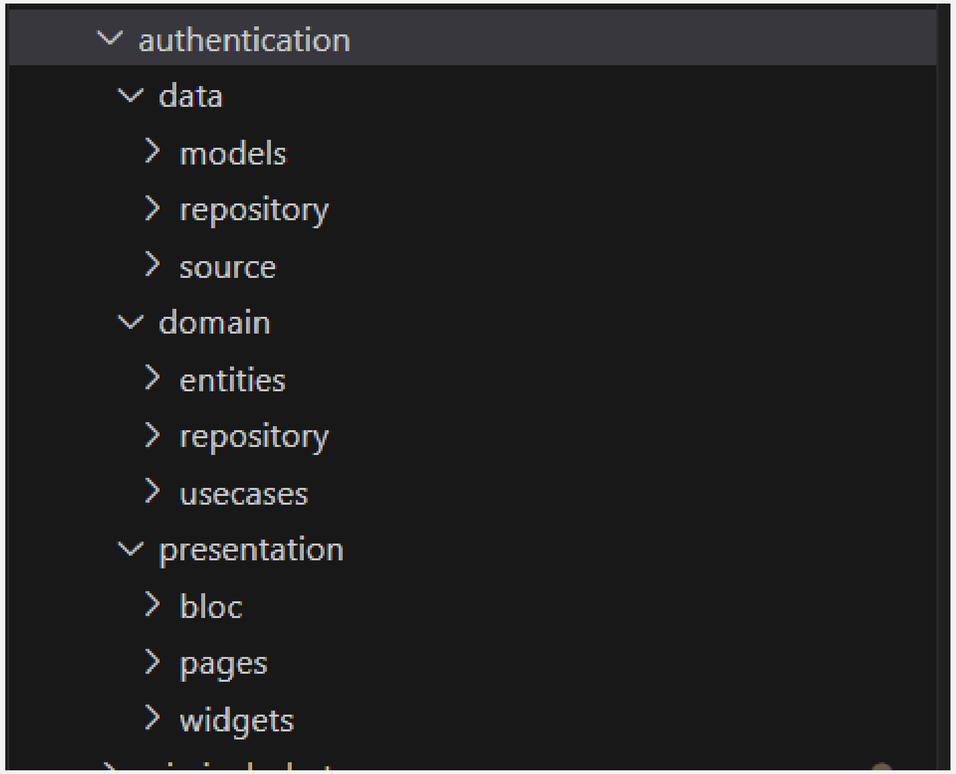
**–Benefits**

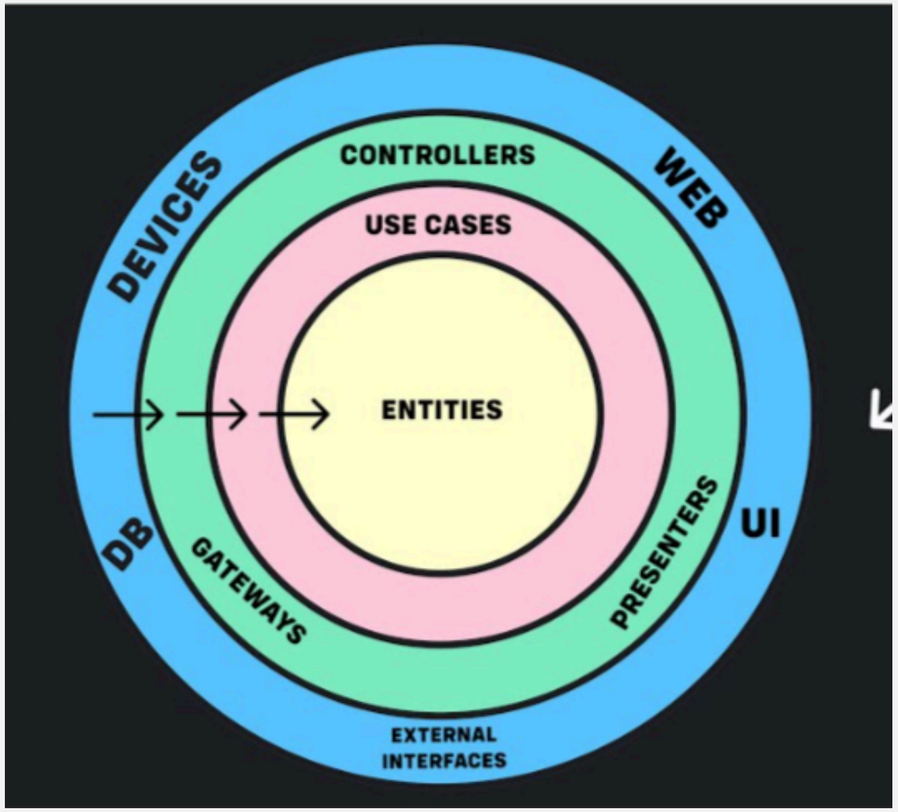
-Improved Maintainability

-Increased Scalability

-Flexibility

# Folder Structure





| | |
|---|---|
| **State Mangement:** | Bloc/Cubit |
| **Routing** | Go Router |
| **Dependency Injection:** | get_it |
| **Error handling:** | Dartz |
| **Cloud Storage:** | Supabase |
